## Wolfe Wave Theory

Wolfe Wave is naturally occurring trading pattern present in all financial markets. The pattern is composed of five waves showing supply and demand and a fight towards an equilibrium price. These patterns can develop over short- and long-term time frames such as minutes or weeks and are used to predict where a price is heading and when it will get there.

pic. 1 - Bullish WolfeWave

pic. 2 - Bearish Wolfe Wave

To identify Wolfe waves, they must have the following characteristics:

- Waves 3-4 must stay within the channel created by 1-2
- Wave 1-2 equals waves 3-4 (shows symmetry)
- Wave 4 is within the channel created by waves 1-2
- There is regular time between all waves
- Wave 5 exceeds trendline created by waves 1 and 3 and is the entry point

The estimated price is a price along the trendline created by waves 1 and 4 (point 6).

Wolfe waves was introduced by Linda Raschke. INTERVIEW: LINDA BRADFORD RASCHKE ON SHORT TERM TRADING STRATEGIES, August 1997, AIQ Opening Bell ([Click to view](#))
